Cyber & Internet Disruption

Layer-7 DDoS attack intensity (0-100, normalized) & internet outages over the last 90 days, daily, all on one scale - Source: Cloudflare Radar.

Situation Summary

Azerbaijan remains a stable, mid-range security environment (global rank #42) with no tracked major incidents in the past seven days. The threat picture is characterized by persistent low-level cyber activity targeting government infrastructure, isolated border-enforcement operations, and diplomatic engagement with regional partners. No armed conflict, civil unrest, or mass-casualty events are evident; however, U.S. Embassy security alerts flag underlying concern about terrorism and crime in public spaces.

Key Developments

- 17 November, Baku - U.S. Embassy issued a security alert to American citizens warning of potential terrorist or criminal activity at holiday festivals, public gatherings, markets, transportation hubs, and shopping malls; alert does not reference a specific credible threat but reflects general vigilance posture.

- 17 November, Baku - President Aliyev received German Foreign Minister Johann David Wadephul; bilateral and regional issues were discussed, signaling continuation of Western diplomatic engagement.

- 17 November, Baku - President Aliyev met Georgian Deputy Prime Minister and Economy Minister Mariam Kvrivishvili to address bilateral relations and cooperation.

- 19 November, Baku - Azerbaijan's State Security Service chief Ali Naghiyev and Georgian security counterpart Tamaz Borashvili met to discuss regional security challenges and strengthen bilateral

cooperation.

- 19 November, nationwide (government networks) - State Security Service cybersecurity official Davud Rustamov disclosed that Azerbaijani government websites, including gov.az domain resources, have been targeted by distributed-denial-of-service and other cyberattacks; Rustamov did not attribute the attacks or specify damage.

- 19 November, Baku - Rustamov warned at an international cyberdiplomacy conference that artificial-intelligence systems and outdated software libraries pose accelerating risks to critical information infrastructure; statement reflects heightened focus on cyber defense posture.

Highest-Risk Areas

Sub-national risk ranking data is unavailable in this reporting cycle. At the national level, Baku remains the primary focus of diplomatic activity and security monitoring. Border areas-particularly the Iran-Azerbaijan frontier near Horadiz (site of illegal-entry attempts on 4 November)-and settlements hosting refugees (such as Jabrayil) warrant continued monitoring for smuggling, narcotics trafficking, and irregular migration. No geographic sub-region has emerged as substantially higher-risk than others based on the past week's verified events.

How GeoBit Would Assist

Security and risk teams operating in Azerbaijan should deploy AOI Monitoring & Early Warning on critical government facilities and public gathering spaces in Baku to detect emerging threats in advance of mass events. Cyberattack & Network Analysis capabilities would enable continuous monitoring of gov.az infrastructure and broader government networks to track DDoS and intrusion activity, establish attribution patterns, and inform defensive posture. Multi-language OSINT and Telegram/social-media intelligence would surface early signals of plot activity, extremist recruitment, or organized-crime operations before they escalate to kinetic incidents.

7-Day Outlook

Cyber-targeting of government infrastructure is likely to persist as a low-intensity, ongoing concern; no escalation to kinetic attack or mass-casualty incident is indicated. Diplomatic engagement with regional partners (Georgia, Germany) is expected to continue, with no acute political destabilization forecast. Holiday-season public gatherings will remain a nominal security consideration; monitor for any refinement of threat intelligence that would warrant elevation of advisory posture.
