Layer-7 DDoS attack intensity (0-100, normalized) & internet outages over the last 28 days - Source: Cloudflare Radar.

## Situation Summary

San Marino remains a low-threat jurisdiction with no acute security incidents reported in the last 24-48 hours. The composite national threat score of 2 (rank #192 globally) reflects the country's stable political environment, minimal organized crime presence, and robust rule of law typical of small European microstates. No developments in unrest, terrorism, infrastructure disruption, or travel restrictions have emerged, and the security posture appears stable with no indicators of near-term deterioration.

## Key Developments

- No significant security incidents identified across San Marino in the past 24-48 hours; open-source monitoring of news feeds, social media (X/Twitter, Instagram, Facebook), and regional outlets yielded no reports of protests, violence, crime, or infrastructure failure.
- City of San Marino and Serravalle remain the highest-risk sub-national zones (scores 85 and 68 respectively), though risk concentration reflects population density and tourism volume rather than active threat events; no acute incidents in either location were detected.
- Travel and transit infrastructure stable - no disruptions to road access, telecom services, or cross-border movement with Italy reported; San Marino's reliance on Italian infrastructure (power, water, airport access) shows no degradation.
- Political institutions functioning normally - no extraordinary sessions, government crises, or tension between the Captains Regent or Grand and General Council were noted in diplomatic or

parliamentary feeds.

- No new foreign ministry travel advisories issued - San Marino continues to fall under standard Italy/Schengen guidance; no major powers issued updated warnings for the country in the assessment window.

## Highest-Risk Areas

Citta di San Marino and Serravalle dominate the sub-national risk profile (85 and 68, respectively), driven primarily by population concentration, tourist throughput, and associated petty crime and crowd-management considerations rather than organized violence or political instability. Borgo Maggiore (52) ranks third and reflects similar urban density factors. Lower-risk municipalities (Domagnano, Faetano, Chiesanuova, Montegiardino, Acquaviva) remain peripheral both geographically and in terms of security event concentration. The ranking architecture emphasizes exposure and volume rather than localized acute threats; none of the designated high-risk areas show evidence of current instability.

## How GeoBit Would Assist

Organizations with personnel or assets in San Marino should leverage AOI Monitoring & Early Warning capabilities to establish persistent surveillance of Citta di San Marino and Serravalle for protest activity, crime spikes, or political disruption, with alerting configured to flag material changes in the current stable baseline. Multi-language OSINT, X/Twitter and social-media intelligence, and sentiment analysis enable continuous passive monitoring of local and regional discourse without requiring active on-ground resources. Risk & Threat Assessment and Routing & Network Analysis can support contingency planning for business continuity and personnel movement in the event of unexpected infrastructure or border disruption affecting cross-border flow to/from Italy.

## 7-Day Outlook

No material changes to the current low-threat environment are forecast over the next seven days absent unexpected political or economic shocks in Italy or broader Europe. Seasonal tourism remains the primary driver of foot traffic and petty-crime exposure in urban centers. Continued monitoring of Italian regional developments (Emilia-Romagna, Veneto) is warranted, as instability or industrial action in neighboring areas could incidentally affect transit and business operations in San Marino.
