Cyber & Internet Disruption

Layer-7 DDoS attack intensity (0-100, normalized) & internet outages over the last 28 days - Source: Cloudflare Radar.

Situation Summary

Seychelles remains in a stable security posture with no reported incidents, civil unrest, infrastructure disruption, or acute travel risks in the last 24-48 hours. The composite national threat score remains minimal (4/100), reflecting the archipelago's historically low incidence of organized violence, terrorism, and major crime. Recent diplomatic engagement with Italy, the UK, and the United States signals active security-capacity building rather than crisis response, indicating authorities are focused on forward-looking maritime and cyber resilience.

Key Developments

- Victoria, Mahe - 10-12 June 2026 - Seychelles and Italy reaffirmed cooperation on maritime security and capacity building during high-level State House discussions, focusing on tourism and institutional strengthening with no acute incidents reported.
- Victoria, Mahe - 11-12 June 2026 - UK-Seychelles talks advanced plans for joint work on maritime security, illicit finance, drugs interdiction, and cyber capability enhancement, framed as proactive security cooperation.
- Victoria, Mahe - 12 June 2026 - U.S. Embassy announced signing of a State Partnership Program agreement between Seychelles Defence Forces and the New Mexico National Guard, aimed at enhancing defense capacity and interoperability.
- Victoria, Mahe - 10 June 2026 - Cabinet approved new agricultural infrastructure projects on Mahe and Praslin to strengthen local meat production, a routine domestic development decision with no

security implications.

- Seychelles (specific location not disclosed) - 12 June 2026 - A public statement was issued regarding disagreement between Seychelles and the Ministry of Health; details remain limited in available reporting, and no escalation or broader civil unrest has been reported.

No verifiable reports of terrorist activity, large-scale protests, major criminal incidents affecting foreigners, or infrastructure failures emerged in the 24-48-hour window.

Highest-Risk Areas

Les Mamelles, Pointe La Rue, and Bel Air (risk scores 70, 68, and 65 respectively) constitute the highest-risk sub-national zones and likely reflect Victoria's density and transactional activity (port, commercial, and administrative concentration). Plaisance and Roche Caiman (scores 62 and 58) follow, with risk declining in peripheral and rural districts. The concentration of risk in the capital's administrative and commercial hubs is typical of small-island economies where population and economic activity are heavily centralized; no evidence suggests these areas face acute or imminent threats beyond standard urban-zone risks (petty crime, administrative friction).

How GeoBit Would Assist

Corporate security teams with staff or assets in Seychelles would employ AOI Monitoring & Early Warning to track the highest-risk districts (Les Mamelles, Pointe La Rue) for signs of labor unrest, port disruption, or civil friction, with automated alerting on sentiment shift and event clustering. Maritime & Aviation tracking capabilities would monitor the surrounding exclusive economic zone for illicit fishing, irregular maritime movement, or transnational contraband activity-particularly relevant given ongoing UK-Seychelles and Italy-Seychelles maritime security cooperation. Intel Sweep and multi-language OSINT fusion would maintain continuous watch on local government statements, health sector announcements, and diplomatic developments to detect early signals of policy shifts or institutional stress affecting business operations or expatriate communities.

7-Day Outlook

No material escalation in security risk is anticipated over the next seven days. The tempo of diplomatic engagement and capacity-building initiatives suggests stable governance and international confidence in Seychelles' trajectory. Duty-of-care teams should maintain standard operational awareness, particularly around the capital and port zones, and monitor government health and regulatory announcements for any policy shifts affecting business continuity.
