Situation Summary

Zimbabwe remains a low-threat environment globally (rank #97, composite score 2) with no significant security incidents recorded in the current reporting window. The country's security posture is stable, though sub-national risk is heavily concentrated in Midlands Province, which carries a composite risk score nearly seven times higher than the second-ranked region. No discrete events have been flagged in the last 24-48 hours, and available web signals are insufficient to confirm any recent developments requiring immediate corporate action.

Key Developments

No confirmed security incidents or developments have been identified in Zimbabwe during the last 24-48 hours. Web research yielded insufficient corroboration and unclear recency verification on border-control reports and regional security references; these do not meet the threshold for inclusion as current developments without independent confirmation and publication timestamps. Organizations with operations or personnel in Zimbabwe should maintain standard duty-of-care monitoring but are not facing an acute tactical threat at this time.

Highest-Risk Areas

Midlands Province dominates the sub-national risk profile, with a composite score of 31.4-substantially exceeding all other provinces and regions. The next two highest-risk areas-Mashonaland West (4.5) and Mashonaland East (3.5)-remain significantly lower in absolute risk. All remaining nine provinces and Harare cluster between 1.4 and 1.9. This concentration suggests

that security concerns in Zimbabwe are geographically limited; organizations with personnel or assets outside Midlands Province face materially lower risk, though reasons for Midlands' elevated score are not detailed in available event data and warrant targeted local-source investigation.

How GeoBit Would Assist

Security teams operating in Zimbabwe should deploy AOI (Area-of-Interest) Monitoring & Early Warning on Midlands Province and key transport corridors (particularly Beitbridge) to detect emerging incidents with minimal latency. Multi-language OSINT and X/Telegram monitoring of local security, police, and media accounts will provide real-time corroboration of border disruptions, road safety changes, or civil unrest before they escalate. Routing & Network Analysis can identify alternative travel and supply-chain pathways in the event of localized road closures or border delays, supporting rapid contingency response for duty-of-care teams.

7-Day Outlook

No specific triggers suggest material deterioration in Zimbabwe's security environment over the next seven days. Continued monitoring of Midlands Province and Beitbridge border operations is warranted to detect any shift in pattern; however, absent new intelligence, the country is expected to remain within its current low-threat profile. Organizations should refresh local-source collection protocols to close current intelligence gaps and ensure rapid detection of any emerging sub-national incidents.

Highest-Risk Areas - Ranked

#	State / Region	Risk
1	Midlands Province	31.42
2	Mashonaland West Province	4.53
3	Mashonaland East Province	3.54
4	Masvingo Province	1.95
5	Matabeleland South Province	1.46
6	Matabeleland North Province	1.47
7	Bulawayo Province	1.48
8	Mashonaland Central Province	1.49
9	Harare	1.410
10	Manicaland Province	1.4
